

EVA Modular kitchen

EVA is a modular kitchen consisting of a base structure, individual cupboard modules and a countertop. The modules are latched onto the base and the countertop then holds the entire block together.

EVA Modular kitchen

The base is equipped with height-adjustable legs, which make it easy to adjust the kitchen to uneven floors. The modules, which can also be made to measure, can be adapted, rearranged and added to at any time.

To produce EVA, we use either oiled or colour varnished birch plywood panels that have been coated with a melamine resin. The translucent, coloured surface emphasizes the grain of the wood, and is odourless and easy to clean. EVA is available in the standard colours listed below; other colours are available upon request. Additional materials including solid wood, stone or marble are also available upon request. In addition to the standard modules, additional widths, custom-fittings, corner solutions and appliance cabinets (e.g. for a fridge) can be produced.

Produced in Welsberg, South Tyrol.

Concept & Design: Georg Agostini, Lorenz Sternbach

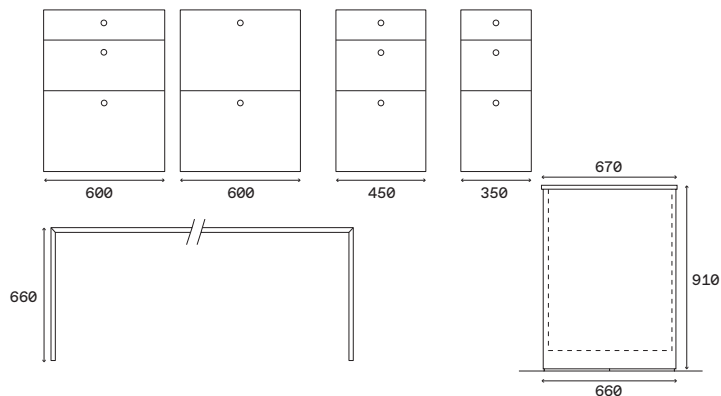

EVA Specifications

The kitchen block is available in several lengths. It can be flexibly designed using the three standard modular units (standard widths: 60, 45, 35cm). Assembly and disassembly are simple and quick so that the kitchen can survive moves or renovations unscathed.
